---

## Summary

---

As a former UI/UX designer now turned Flutter Developer, my passion lies in creating fully functional applications that work seamlessly. With a keen eye for design, I ensure that the apps I develop are both visually appealing and user-friendly.

---

## Projects

---

### E-Commerce application | Flutter

In this project, I've followed the N-Tier architecture, GitHub for version control management, as a state management tool I've used GetX though it's the most hated but great to start.

GitHub

### Task manager application | Flutter

To perform the CRUD operation I've worked on a to-do application to learn the CRUD operations well. In this scenario I've used rest-api and Postman tool.
