Summary

As a former ui/ux designer now turned flutter developer, my passion lies in creating fully functional applications that work seamlessly. With a keen eye for design, I ensure that the apps I develop are both visually appealing and user-friendly.

Projects

E-Commerce application | Flutter

This is an ecommerce application built with restful apis. In this project I followed N-Tier architecture. For version control management I've used GitHub and GetX for state management.

`GitHub`

Task manager application | Flutter

To perform the CRUD operation with restful apis I've worked on a this task manager application. I've followed the N-Tier architecture, GitHub, and Postman tool. For state management, I've used getx.

`GitHub`

News paper application | Flutter

A News paper application made with free apis. I've followed the N-Tier architecture, GitHub for version control, Postman for api testing, and Figma for design inspiration.
